Individual Quality Control Plan for WBS 6.03.06			Revision: 0

Individual Quality Control Plan for WBS 6.03.06 (Solenoid Magnet)

1. BACKGROUND & PURPOSE

Individual product Quality Control Plans are an extension of the overall Detector Systems Product Quality Control Plan and provide detailed descriptions of the quality control factors that are relevant to a specific product. Like all Quality Control Plans, they are required by the EIC Requirements Management Plan and are used to ensure that a system or deliverable will satisfy all pertinent requirements and specifications.

The plan should be developed in accordance with the requirements of the EIC Project Plans and Documents referenced in Table 1.

Table 1. EIC Project Plans and Documents

Document Name	Document Number
Integrated Safety Management Plan (ISMP)	EIC-ESH-PLN-007
Global Requirements Document (GLRD)	add document number
Requirements Management Plan (RMP)	EIC-SEG-PLN-016
General, Functional, and Performance Requirements for the EIC Detector Systems	EIC-SEG-RSI-007
Interface Requirements for the EIC Detector Systems	EIC-SEG-RSI-064
Interface Management Plan (IMP)	add document number
EIC Code of Record	EIC-ORG-RSI-026
Configuration Management Plan	EIC-ORG-PLN-025
EIC Quality Assurance Plan	EIC-QAG-PLN-002
Detector Systems Product Quality Control Plan	
Pressure Systems Design Authority	JLAB ES&H Manual 6151
JLAB Conduct of Engineering Manual	ENG-AD-01-001

1.1. Responsibilities

Per the Quality Assurance Plan, L3 Managers are responsible for developing Quality Control (QC) Plans for their areas of responsibility and are to ensure that:

- the plans are available and controlled,
- teams are working in accordance with the plans, and
- plans are review at an adequate frequency to identify need for change, or to support advance planning of acquisitions and procurements (whether tangible or services, like designs) from other providers (Vendors, In-Kind Contributors, Partners)

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

1.2. Categories of Producers

In general, all sub-systems and components in the Detector System will be obtained from one of three possible sources: vendor contract, institutional partner, or in-house construction. These sources are described in detail in the Detector Systems Product Quality Control Plan.

2. SCOPE OF QUALITY CONTROL PLAN

This Individual Quality Control Plan addresses the components within WBS 6.03.06 (Solenoid Magnet) that require supplemental documentation beyond what is provided in the Detector Systems Product Quality Control Plan. This section will identify the pertinent components or assemblies within the WBS that are covered by this plan, and will identify the category of provider (vendor contract, institutional partner, or in-house construction), and the approach for quality assurance that will be used for that product.

2.1. Conductor (Strand)

This component is composed of multiple sub-components, each of which has their own quality assurance requirements which are detailed in this document. These include:

- Material Purchase

The following quality control measures are required:

- | | |
|---|-------------|
| ▪ In-Process Inspection and Test | Section 4/5 |
| ▪ Travelers, Procedures, and Checklists | Section 7 |
| ▪ Deliverable Documentation and Records | Section 9 |
| ▪ Planned Partner and Vendor Communication & Visits | Section 13 |
| ▪ Control of Nonconformances | Section 14 |

2.2. Conductor (Cable)

This component is composed of multiple sub-components, each of which has their own quality assurance requirements which are detailed in this document. These include:

- Material Purchase

The following quality control measures are required:

- | | |
|---|-------------|
| ▪ In-Process Inspection and Test | Section 4/5 |
| ▪ Travelers, Procedures, and Checklists | Section 7 |
| ▪ Deliverable Documentation and Records | Section 9 |
| ▪ Planned Partner and Vendor Communication & Visits | Section 13 |
| ▪ Control of Nonconformances | Section 14 |

2.3. Conductor (Channel)

This component is composed of multiple sub-components, each of which has their own quality assurance requirements which are detailed in this document. These include:

- Material Purchase

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

The following quality control measures are required:

- In-Process Inspection and Test Section 4/5
- Travelers, Procedures, and Checklists Section 7
- Deliverable Documentation and Records Section 9
- Planned Partner and Vendor Communication & Visits Section 13
- Control of Nonconformances Section 14

2.4. Conductor (Soldered)

This component is composed of multiple sub-components, each of which has their own quality assurance requirements which are detailed in this document. These include:

- Material Purchase

The following quality control measures are required:

- In-Process Inspection and Test Section 4/5
- Incoming Inspection and Acceptance Test Section 6
- Travelers, Procedures, and Checklists Section 7
- Verification Plans, Methods, and Activities Section 8
- Deliverable Documentation and Records Section 9
- Planned Partner and Vendor Communication & Visits Section 13
- Control of Nonconformances Section 14
- Packaging/Transportation/Shipping Section 15

2.5. Magnet Power Supply

This component is composed of multiple sub-components, each of which has their own quality assurance requirements which are detailed in this document. These include:

- Material Purchase

The following quality control measures are required:

- In-Process Inspection and Test Section 4/5
- Incoming Inspection and Acceptance Test Section 6
- Travelers, Procedures, and Checklists Section 7
- Deliverable Documentation and Records Section 9
- Calibration Plans Section 11
- Serialization and Material Traceability Requirements Section 12
- Planned Partner and Vendor Communication & Visits Section 13
- Control of Nonconformances Section 14
- Packaging/Transportation/Shipping Section 15

2.6. Magnet

This component is composed of multiple sub-components, each of which has their own quality assurance requirements which are detailed in this document. These include:

The only official copy of this document is the one online in the SharePoint Document Center. Before using a printed copy, verify that it is current by checking the printed document's Version History log with that of the online version.

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

- Material Purchase

The following quality control measures are required:

- In-Process Inspection and Test Section 4/5
- Incoming Inspection and Acceptance Test Section 6
- Travelers, Procedures, and Checklists Section 7
- Verification Plans, Methods, and Activities Section 8
- Deliverable Documentation and Records Section 9
- Calibration Plans Section 11
- Planned Partner and Vendor Communication & Visits Section 13
- Control of Nonconformances Section 14
- Packaging/Transportation/Shipping Section 15

3. REQUIREMENTS TRACEABILITY

Requirement traceability will be accomplished as described in Section 3 of Detector Systems Product Quality Control Plan.

SPECIFIC QUALITY CONTROL MEASURES

4. IN-PROCESS INSPECTION AND TEST

In-process inspections and tests for components **built in-house** provide a mechanism for detecting non-conformances in materials, components, or assemblies during fabrication and assembly. This allows problems to be identified and corrected as early as possible, minimizing the impact of manufacturing deficiencies.

Test plans, technical reports, test results, and other documentation resulting from these inspections and tests will be compiled into a report and placed in the central data repository. The document will be referenced through the document index on the EIC Systems Engineering portal.

This section is not applicable.

5. OUTSOURCING: VENDOR/PARTNER/CONTRIBUTORS IN-PROCESS

In-process inspections and tests for outsourced components will be addressed differently for each category of providers. In all cases that tests and inspections are required, a test plan will be developed and approved by the project.

Test plans, technical reports, test results, and other documentation resulting from these inspections and tests will be compiled into a report and provided to the project as part of the deliverable. This report will be reviewed, validated, and then placed in the central data repository. The document will be referenced through the document index on the EIC Systems Engineering portal.

The only official copy of this document is the one online in the SharePoint Document Center. Before using a printed copy, verify that it is current by checking the printed document's Version History log with that of the online version.

5.1. Conductor (Strand)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

5.1.1. Material Purchase

This component will be produced as part of a vendor contract and the inspections and tests are identified in the Statement of Work. Additional information is provided in the reference: Magnet Conductor Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

5.2. Conductor (Cable)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

5.2.1. Material Purchase

This component will be produced as part of a vendor contract and the inspections and tests are identified in the Statement of Work. Additional information is provided in the reference: Magnet Conductor Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

5.3. Conductor (Channel)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

5.3.1. Material Purchase

This component will be produced as part of a vendor contract and the inspections and tests are identified in the Statement of Work. Additional information is provided in the reference: Magnet Conductor Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

5.4. Conductor (Soldered)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

5.4.1. Material Purchase

This component will be produced as part of a vendor contract and the inspections and tests are identified in the Statement of Work. Additional information is provided in the reference: Magnet Conductor Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

The only official copy of this document is the one online in the SharePoint Document Center. Before using a printed copy, verify that it is current by checking the printed document's Version History log with that of the online version.

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

5.5. Magnet Power Supply

This component is composed of multiple sub-components/activities which have independent quality control parameters.

5.5.1. Material Purchase

This component will be produced as part of a vendor contract and the inspections and tests are identified in the Statement of Work. Additional information is provided in the reference: MPS Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

5.6. Magnet

This component is composed of multiple sub-components/activities which have independent quality control parameters.

5.6.1. Material Purchase

This component will be produced by an industry partner as an in-kind contribution and the inspections and tests are identified in the Project Planning Document. Additional information is provided in the reference: Magnet Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

6. INCOMING INSPECTION AND ACCEPTANCE TESTS

Incoming inspections and acceptance tests are used to confirm that materials or products provided by a vendor or partner institution have been produced in accordance with the plans and specifications, and meet all system requirements. These plans should be developed in conjunction with the transportation and shipping plans to account for potential impacts of moving items between locations.

Incoming inspections and acceptance tests will be addressed differently for each category of providers. These documents identify the schedule and frequency of such tests, how the results will be reported, and which material and documentation should be supplied to the project with the deliverable.

Test plans, technical reports, test results, and other documentation resulting from these inspections and tests will be compiled into a report and placed in the central data repository. The document will be referenced through the document index on the EIC Systems Engineering portal.

6.1. Conductor (Soldered)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

6.1.1. Material Purchase

This component will be produced as part of a vendor contract and the inspections and tests are identified in the Statement of Work. Additional information is provided in the reference: Magnet Conductor Inspection and Test Plan, which is available from the link below:

Electron-Ion Collider, Brookhaven National Laboratory

Individual Quality Control Plan for WBS 6.03.06			Revision: 0

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

6.2. Magnet Power Supply

This component will be produced as part of a vendor contract and the inspections and tests are identified in the Statement of Work. Additional information is provided in the reference: MPS Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

6.3. Magnet

This component will be produced by an industry partner as an in-kind contribution and the inspections and tests are identified in the Project Planning Document. Additional information is provided in the reference: Magnet Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

7. TRAVELERS, PROCEDURES, AND CHECKLISTS

For every item that is manufactured, the manufacturer will be responsible for maintaining records (travelers) of all raw material that are used in the fabrication process, and document the processes and procedures that were used for production. The resultant documentation will be compiled into a report and will be provided to the project as part of the deliverable. This report will be reviewed, validated, and then placed in the central data repository. The document will be referenced through the document index on the EIC Systems Engineering portal.

7.1. Conductor (Strand)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

7.1.1. Material Purchase

- In Process Inspections

If the project will require records of how the materials were acquired, transported, maintained, or disposed, then describe the information that will be required here.

- In Process Inspections

If there are other travelers, procedures, or checklists that are not covered in the preceding section, describe those here.

7.2. Conductor (Cable)

- In Process Inspections

If the project will require records of how the materials were acquired, transported, maintained, or disposed, then describe the information that will be required here.

- In Process Inspections

The only official copy of this document is the one online in the SharePoint Document Center. Before using a printed copy, verify that it is current by checking the printed document's Version History log with that of the online version.

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

If there are other travelers, procedures, or checklists that are not covered in the preceding section, describe those here.

7.3. Conductor (Channel)

- In Process Inspections

If the project will require records of how the materials were acquired, transported, maintained, or disposed, then describe the information that will be required here.

- In Process Inspections

If there are other travelers, procedures, or checklists that are not covered in the preceding section, describe those here.

7.4. Conductor (Soldered)

- In Process Inspections

If the project will require records of how the materials were acquired, transported, maintained, or disposed, then describe the information that will be required here.

- In Process Inspections

If there are other travelers, procedures, or checklists that are not covered in the preceding section, describe those here.

7.5. Magnet Power Supply

- In Process Inspections

If there are other travelers, procedures, or checklists that are not covered in the preceding section, describe those here.

7.6. Magnet

- In Process Inspections

If the project will require records of how the materials were acquired, transported, maintained, or disposed, then describe the information that will be required here.

- Production/Fabrication Process Records

If the project will require records for the production, fabrication, or manufacturing process, then describe the information that will be required here.

- In Process Inspections

If there are other travelers, procedures, or checklists that are not covered in the preceding section, describe those here.

8. VERIFICATION PLANS: METHODS AND ACTIVITIES

Verification plans are used to coordinate the orderly scheduling of events by providing equipment specifications and organizational requirements, the test methodology to be employed, a list of the test

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

materials to be delivered, and a schedule for user (tester) orientation and participation. Finally, it provides a written record of the required inputs, execution instructions, and expected results of the system test.

The resultant documentation will be compiled into a report and will be provided to the project as part of the deliverable. This report will be reviewed, validated, and then placed in the central data repository. The document will be referenced through the document index on the EIC Systems Engineering portal.

8.1. Conductor (Soldered)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

8.1.1. Material Purchase

- External Verification

This component will be produced as part of a vendor contract and the verification plans are identified in the Statement of Work.

8.2. Magnet

- Verification as Part of Assembly

This component is part of a larger system that will be tested as a complete assembly. Details are provided in the reference: Magnet Inspection and Test Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

9. DELIVERABLE DOCUMENTATION AND RECORDS

Documentation and records that must be provided to the project is specified in the Statement of Work, Project Planning Document, work agreement, or work planning documents identified in the preceding sections. All testing and inspection data that is collected as part of the validation, verification and testing plan will be provided to the project as part of the final report.

10. ASSOCIATED EQUIPMENT

Associated equipment describes tools, parts, materials, components, fixtures and assemblies that are independent of the final product. Any associated equipment that must be delivered to the project is identified in the Statement of Work, Project Planning Document, work agreement, or work planning documents identified in the preceding sections. Conditions of acceptance of this material will be described in the validation, verification and testing plan.

Associated equipment that is required for in-house testing is as follows:

10.1. Magnet

This component is composed of multiple sub-components/activities which have independent quality control parameters.

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

10.1.1. Material Purchase

If additional equipment must be provided to perform in-house testing, identify and describe the equipment here.

11. CALIBRATION PLANS

Vendors, partners, and employees shall calibrate any measuring and test equipment used in production or testing against certified standards that are traceable to national standards such as the National Institute of Standards and Technology (NIST), or an international standard, or a physical constant. Specific requirements for calibration plans are described in the Detector Systems Product Quality Control Plan.

11.1. Magnet

This component is composed of multiple sub-components/activities which have independent quality control parameters.

11.1.1. Material Purchase

A calibration plan is required for this component. Details are available from reference: Solenoid Magnet Mapping Plan, which is available from the link below:

<https://eic.jlab.org/Documents/DET/Quality/ITP/Incomplete/>

12. SERIALIZATION AND MATERIAL TRACEABILITY REQUIREMENTS

Requirements for serialization of parts and materials are as described below.

12.1. Conductor (Strand)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

12.1.1. Material Purchase

This component cannot be serialized because it would degrade overall detector performance. No serialization will be performed.

12.2. Conductor (Cable)

This component cannot be serialized because it would degrade overall detector performance. No serialization will be performed.

12.3. Conductor (Channel)

This component cannot be serialized because it would degrade overall detector performance. No serialization will be performed.

12.4. Conductor (Soldered)

This component cannot be serialized because it would degrade overall detector performance. No serialization will be performed.

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

12.5. Magnet Power Supply

Serialization of this component is required by Statement of Work.

12.6. Magnet

This component cannot be serialized because it would degrade overall detector performance. No serialization will be performed.

13. PLANNED PARTNER AND VENDOR COMMUNICATION & VISITS

Periodic program technical and progress telecommunications and/or meetings between the vendors/partners and project leaders will be conducted to discuss work progress, technical and contractual questions, presentations of analysis or testing results, troubleshooting, material status, tooling status, resources, and manufacturing issues. The schedule and frequency of these communications is described below.

In addition to the information provided here, technical updates and progress reports may also be provided at the regularly scheduled detector collaboration meetings. The schedule is available at <https://indico.bnl.gov/category/402/calendar>.

13.1. Conductor (Strand)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

13.1.1. Material Purchase

The communication schedule for this component is provided in the Statement of Work.

13.2. Conductor (Cable)

The communication schedule for this component is provided in the Statement of Work.

13.3. Conductor (Channel)

The communication schedule for this component is provided in the Statement of Work.

13.4. Conductor (Soldered)

The communication schedule for this component is provided in the Statement of Work.

13.5. Magnet Power Supply

The communication schedule for this component is provided in the Statement of Work.

13.6. Magnet

The communication schedule for this component is provided in the Project Planning Document.

14. CONTROL OF NONCONFORMANCES

Vendors, partners, and in-house providers are responsible to provide items which conform to the requirements of the contract or work agreement, regardless of any assessments, surveillances, inspections

The only official copy of this document is the one online in the SharePoint Document Center. Before using a printed copy, verify that it is current by checking the printed document's Version History log with that of the online version.

Electron-Ion Collider, Brookhaven National Laboratory			
Doc No.	Author:	Effective Date: August 17, 2026	Review Frequency: None
Individual Quality Control Plan for WBS 6.03.06			Revision: 0

and/or tests that are conducted as part of the validation and verification process. Non-conformances, significant variations in quality, recalls, and alerts will be reported to the project.

15. PACKAGING/TRANSPORTATION/SHIPPING

In preparation for shipping, a packaging plan will be developed that will be reviewed and approved by the project prior to shipment. Preservation, packaging, and packing for shipment or mailing of all work deliverables shall be in accordance with standard commercial practice and adequate to insure acceptance by common carrier and safe transportation at the most economical rates.

Packaging plans must comply with the standards established in the Detector Systems Product Quality Plan.

15.1. Conductor (Soldered)

This component is composed of multiple sub-components/activities which have independent quality control parameters.

15.1.1. Material Purchase

The packaging plan for this component is included in the Statement of Work.

15.2. Magnet Power Supply

The packaging plan for this component is included in the Statement of Work.

15.3. Magnet

The packaging plan for this component is included in the Project Planning Document.
